

Nail Files - for Natural Fingernails & Toenails

"Metal files, coarse emery boards and nail clippers, "shred" the free-edge of the natural nail causing peeling, breaking, splitting and cracking. And, clipping the toenails improperly causes ingrown toenails."

- Tammy Taylor **"Natural Nail Shaper File"** (disinfectable and washable)

Your Tammy Taylor Natural Nail Shaper File was created to help promote Healthy, Strong, Natural Fingernails.

Important Nail Pointers:

- Do Not use Metal files or Coarse Emery boards on Natural Fingernails, these will shred the free-edge
- Do Not clip Natural Fingernails to shorten, or the Natural Fingernails will peel and crack

- Tammy Taylor **"Aluminum Oxide File"** (disinfectable and washable)

The Tammy Taylor "Aluminum Oxide File" is for shortening and filing Toenails and Natural Fingernails.

- Great for a Man's manicure

- Coarse enough to shorten toenails, but not rough, leaving toenails smooth, so they don't snag on socks.

The Proper Way to Shorten Toenails:

- Clipping the toenails too short or clipping into the corners causes the most problems with ingrown toenails.
- Always clip or file straight across so the corners can grow over the skin and not into the skin.
- Filing straight across is always preferred over clipping
