

NAIL FAQ's by Topic: VIDEO - Pat the White, Stroke the Pink-1-2-3-4

Q: Do you ever get air bubbles in your pink acrylic on the nail bed?

A: Air bubbles are usually caused by patting the Pink Ball, and/or applying the Pink Ball too Dry.

Important: The Pink Ball is always a "wet" Ball, which needs to be stroked like polishing.

To **increase your Speed** and **improve your Nails**, it is very important to **apply** your Acrylic Nails following the **same system** of Product Application **every time**; whether you are doing Long Nails or Short Nails.

The Tammy Taylor 4 BALL METHOD:

#1 BALL - White **Free-edge** Ball / the Largest Ball; **PAT** this Ball into shape

#2 BALL - Pink Ball, used for upper **1/2 of the Nail-Body** / Smaller, Wetter Ball; **STROKE** this Ball like applying polish

#3 BALL - Pink Ball, used for the **Cuticle Area** / Smaller, Wetter Ball; **STROKE** this Ball like applying polish (apply this Ball **1/32nd of an inch away from the cuticle area**)

#4 BALL - Pink Ball, used to build up the **Stress Area** / Smallest, Wettest Ball; **STROKE** this Ball over the entire Nail (place the #4 Ball between the #2 and #3 Ball, almost at the Cuticle area)

- Pointer: **Always look at your Acrylic Ball before** you place it on the Nail, the Ball should have the **Look of a PEARL**.
