

NAIL FAQS BLOG:

How to get a Crisp Smile-Line

Tammy Taylor Nails

"Where Nails are Always Fun and Never Feel Like Work"

When doing Pink & White Acrylic Nails, the Pink Acrylic can run onto your White Free-Edge, causing your White Free-Edge to have a pink cast to it, and making your Smile-Line blurry instead of crisp.

Q: What is the "Secret" to eliminate a blurry Smile-Line?

A: Surface Tension is the #1 Secret.

Also, it is important to remember: Don't Place the Pink Acrylic Ball too close to the White Free-edge, and don't make your Pink Acrylic too thick.

Q: How do I get "Surface Tension"?

Answer:

Tammy Taylor
CEO, Tammy Taylor Nails Inc.
Entrepreneur and Business Owner since 1981

- **"Place" the Pink Acrylic Ball on the Nail-Bed; leaving a gap between the Pink & the White.**
- Do "Not" Touch the White Free-Edge when Placing your Pink Acrylic Ball.

- **"Lift" your brush & Let your Pink Acrylic Ball Flow (count 1-2-3) this develops "Surface Tension".**

- **"Stroke" your Pink Acrylic Ball using long strokes, stroke right over the top of the White Free-Edge.**
- The "Surface Tension". on the Pink Acrylic Ball will keep the Pink from running onto the White.
- **Finish your Pink and White Acrylic Nails by applying 2 more Pink Acrylic Balls; Place one at the Cuticle Area and Stroke it out, then Place the other one at the Stress Area and Stroke it out.**
- The Tammy Taylor Powders used: Whitest White Nail Powder on the Free-Edge and True Pink on the Nail-Bed.

*Have a Great Nail Day,
Tammy Taylor*
